**The Weiland Financial Group Chooses AP Technology Transporter®  
Solution for Secure, Automated File Transfer and Receipt Option**

*Weiland now offers data-safe, unattended 822 and BSB file delivery*

CARLSBAD, CA and Bannockburn, IL – May 21, 2008 –The Weiland Financial Group, Inc., leading provider of financial account solutions, has chosen AP Technology, a leading innovator of secure banking solutions, to supply its secure file transfer capabilities. Using AP Technology's Transporter, Weiland will strengthen contact with their BRMEdge customers by providing a data-safe file exchange environment capable of unattended receipt of electronic account analysis statements (EDI 822 and BSB) from their banks.

Pat Weiland, CEO, The Weiland Financial Group, Inc., says, "We are delighted to be able to offer our customers the Transporter solution. AP Technology's transmission application allows Weiland, on a large scale, to ease the burden of receiving electronic account analysis. And, on a more custom scale, enables us to offer an array of client-side amenities, like automatic initiation of file send and immediate receipt of transmission alerts."

"Weiland is already a landmark in the bank billing and services management solutions area and is now set to enhance its presence with secure data transmission," says Richard Love, Chief Executive Officer, AP Technology. "We are thrilled to provide our Transporter solution to Weiland to assure the secure transmission of critical business information over the Internet."

Transporter, a proprietary web connectivity and data exchange banking application, enables unattended, secure file transfer that automates the process of secure website file exchange for Electronic Account Analysis, ACH, Positive Pay, Balance, Lock Box, Wire Transfer, and more. The application supports HTTPs, HTTP, FTP, FTPs and SFTP communication protocols and is compatible with all file and data types. With Transporter, a connection can be made to the customer's bank websites at a designated time or on demand for a hands-free download of 822 or BSB files. Transporter also offers the option of simply clicking an icon on the user's desktop to initiate the automatic delivery.

"Aligning with AP Technology is an important step in the evolution of our network and underpins Weiland's commitment to providing a superior service experience for our customers," adds Weiland. "By utilizing Transporter, we can continue to further improve automation of the account analysis process."

Transporter enables specified recipients to stay informed of each file arrival (or transmission) through email notifications. Concurrent transmission of multiple files is also possible. The software application is delivered with complete installation support, providing technical assistance through the initial installation process. Bringing new automation and event notification features to Weiland's website process provides BRMEdge users additional ease-of-use, controls, and information timeliness.
